Guide to eye and vision research techniques
Part of ARVO's Global Research Training Program

Lead author: Francine F Behar-Cohen, MD PhD, FARVO

This module is designed to help investigators select or create an appropriate model to answer eye and vision research questions. You will be presented with a thorough review of in vitro, in vivo and ex vivo animal models, along with a discussion of the ethical and regulatory issues associated with these types of research. The module includes a primer on ocular pharmacology research and an overview of the documentation, analysis and presentation of ocular research data.
